About Us

Welcome to EDGE, your trusted partner in converged IT solutions. Established in 2010, we have proudly served businesses with innovative technology solutions for over a decade, driving growth, efficiency, and success. EDGE is an ISO 9001:2015, OHSAS 18001 & ISO 14001 certified company for its perfected quality management system.

"In our expansive vision, we transcend boundaries, pioneering a paradigm shift in the global business ethos by spearheading revolutionary digital innovation through our avant-garde IT solutions, empowering organizations worldwide to not just survive, but flourish amidst the relentless tide of technological evolution, thus fostering perpetual growth and empowerment across the spectrum of industries and beyond.

OUR JOURNEY

Since our inception in 2010, EDGE has embarked on a remarkable journey of growth and success. We began with a vision to revolutionize the way businesses leverage technology, and today, we stand as a leading provider of converged IT solutions, serving clients across UAE and beyond.

OUR MISSION

At EDGE, our mission is to empower businesses with cutting-edge IT solutions that drive growth, efficiency, and success. We are committed to delivering exceptional value to our clients through innovation, expertise, and unwavering dedication to excellence.

OUR VISION

At EDGE, our vision is to be the leading catalyst for digital transformation, empowering businesses to thrive in an ever-evolving technological landscape. We envision a future where organizations leverage the full potential of technology to drive innovation, efficiency, and sustainable growth.

Global Service, Local Support

EDGE's staff, partners, and affiliates provide a robust global network for seamless service and support

Strategically positioned with its HQ in Abu Dhabi and offices in other parts of the MEA region, we provide our services globally and IT, Security, AV, ELV services in Middle East, Africa, and India. EDGE's high customer retention is a result of our loyalty to our customers. Our customers trust us and we are loyal to them. We endeavor to support our clients in their new locations, and this has positively contributed to our aggressive market expansion strategy. We have steadily grown to become a regional leader.

Full scope of ICT and ELV services

EDGE is a full scope ICT, ELV and VTS System Integrator and Solution Provider for governments, Oil and Gas, Mining, Construction, Security and NGO verticals. We provide full scope of ICT and ELV services in the Middle East and Africa markets.

Global Reach

EDGE has a global footprint using 50+ IT & INFRA multiple bands to support multiple platforms covering all continents and oceans. We support our clients in over 12 countries through our strategic partners and associates offices, and professional affiliates and partners.

Local Presence

EDGE's IT & communication and ELV & Security solutions are supported locally through branch offices and partners, giving our customers the advantage of getting support for their businesses when and where they need it.

Key Industries

www.edgeict.com

- ❖ Key Industries Oil & Gas
- ❖ Key Industries Construction
- ❖ Key Industries Security
- ❖ Key Industries Airport & Seaports
- ❖ Key Industries Government

EDGE is a leading ICT and communication solutions provider that is trusted by some of the world's largest companies in the Oil & Gas industry

Key Industries Oil & Gas

EDGE recognizes the the world's increasing need for energy. The rise in demand for development, The rise in demand for development, exploration, and processing results in the need for efficient communication & the advancement and utilization of appropriate technologies to optimizes operations. EDGE makes it easy for Oil & Gas companies to integrate the necessary technologies needed to effectively communicate between remote & hazardous locations and offices.

Our InformationTechnology & communications solutions for the Oil & Gas industry connect multiple technologies ranging from Remote Internet Connectivity Voice & Communication, Security to Network Infrastructure. We unify and fine tune these servicesoptimallyto each of our client's specific requirements in order to seamlessly integrate the service into their existing infrastructure.

EDGE ICT and communications services allow EPC and MEP contractors to execute and accomplish their projects faster, safer, and easier

Key Industries Construction

The construction industry constantly experiences growth in many areas across all market sectors. This trend compels construction companies to strive for higher performance by upgrading to smart and efficient technology solutions. Being a leading single-source solution provider in ICT, EDGE is always one step ahead of its clients technologically in order to ascertain the potential needs in their construction projects and operations. From simple construction operations at remote sites in BAHRAIN and SAUDI ARABIA, to development projects in urban metropolises with highly advanced technological requirements, EDGE's range of technologies and solutions allows MEP and EPC companies to overcome obstacles in Communication, IT Infrastructure, Security, and Internet access. EDGE is a proven partner to contractors from the pre-bid and design phase to the full implementation and commissioning stage

EDGE has the capability of assisting security companies to their critical operations and missions with our very dependable satellite communications services

Key Industries Security

The Security Industry provides professional and reliable security, mission support, training services and logistics worldwide, specializing operations in remote, third world, multi-cultural, and high-risk geographical environments. EDGE provides security companies with mission-critical telecommunications. Safety and security is an important issue and reliable communications services are of supreme importance in maintaining a secure environment.

Security companies turn to EDGE or a comprehensive range of communications solutions to facilitate in the protection of personnel and assets. EDGE supports security firms by providing highly efficient communications solutions, enabling them to connect to field offices and stay operational even during emergencies.

In emergency situations, security companies must possess a resilient and reliable communications network that will work in any remote location to assess the situation and take action effectively. Our reliable, accessible communications services support them to fulfil these critical functions

Physical Security Solutions

EDGE provide sophisticated "Physical Security Solutions" to the measures and techniques implemented to safeguard your physical assets, resources, and personnel from unauthorized access, damage, theft, or harm. Our solutions encompasses a range of strategies such as surveillance systems, access control mechanisms, barriers, locks, and robotics guards to protect physical locations, buildings, infrastructure, and equipment. Physical security aims to prevent or mitigate potential threats and risks to ensure the safety and integrity of people and assets

Ai & IoT Powered ACCESS CONTROL SYSTEM

- SEAMLESS INTEGRATION WITH
- >> Visitor Management System
 - >> LPR/ANPR
 - >> Meeting Room Management
 - >> Building Management System
 - >> Health Data Integration
 - >> Video Management System

We have Comprehensive IT solutions optimizing passenger flow, baggage handling, security, and digital Signage Solution for Airports and Advanced IT services facilitating efficient cargo management, container tracking, security, and seaport operations

Key Industries Airport & Seaports

AIRPORTS SOLUTIONS

Baggage Tracking Systems:- Our systems track the movement of passengers' luggage throughout the airport, ensuring that bags are properly routed and loaded onto the correct flights. RFID technology is commonly used for this purpose.

Security Systems:- Security is a top priority at airports, and IT plays a crucial role in various security systems, including CCTV surveillance, access control systems, and biometric identification systems for staff and passengers.

Digital Signage and Wayfinding:- Digital signage displays can provide passengers with important information such as directions to gates, flight status updates, and advertisements from airport retailers. Interactive wayfinding kiosks can help passengers navigate the airport more easily.

SEAPORTS SOLUTIONS

RFID Technology:- RFID uses radio waves to identify and track objects equipped with RFID tags. Long-range RFID systems utilize RFID tags with extended read ranges, typically ranging from several meters to over a hundred meters, depending on the technology used.

Passive and Active RFID Tags:- Long-range RFID container tracking systems can utilize both passive and active RFID tags. Passive tags do not have an internal power source and rely on energy harvested from the RFID reader's signal for operation, whereas active tags have their own power source, allowing for longer read ranges and continuous communication with readers.

Readers and Antennas:- Long-range RFID systems consist of RFID readers and antennas strategically placed throughout the port area to create a network that can detect and read RFID tags attached to containers. These readers can cover large areas, such as container yards and loading docks, enabling continuous tracking of container movements.

Real-Time Tracking:- Long-range RFID container tracking systems provide real-time visibility into the location and status of containers as they move within the port facility or during transit. This information can be accessed through a centralized software platform, allowing port operators to monitor container movements, optimize workflows, and respond quickly to any disruptions or delays.

UAE GOVERNMENT ONE OF THE MOST EFFICIENT IN THE WORLD

EDGE provides highly competent solution for government authorities would be a comprehensive and integrated Information Communication, security, and business Technology (ICT) system tailored to the specific needs and functions of the government entity.

Key Industries Government

Government Services encompass all frontiers of technology with very strict and defined sets of standards to be met. They have resilient requirements for data, voice, security, network and IT services, and they demand solutions with high performance, availability and utmost reliability. EDGE delivers a strong suite of solutions with very high performance & reliability- and an unfailing 365/7/24 support worthy of embassies, and mission critical organizations across the world.

EDGE Information technology (IT) for government authorities encompasses the use of digital tools, systems, and networks to streamline administrative processes, deliver public services, and enhance governance. This includes a wide range of technologies such as:

Government Portals: Online platforms providing citizens with access to government services, information, and resources.

Digital Identity Management: Systems for securely verifying and managing the digital identities of citizens, employees, and stakeholders.

E-Government Systems: Electronic platforms for conducting government operations, managing records, and facilitating communication between agencies and citizens.

Data Analytics: Tools for analyzing large volumes of government data to gain insights, improve decision-making, and enhance public services.

Cyber security Solutions: Measures and technologies to protect government networks, systems, and data from cyber threats and attacks.

Mobile Applications: Apps for delivering government services, engaging with citizens, and providing access to information on mobile devices.

Cloud Computing: Utilizing cloud services for storage, computing power, and collaboration, enabling scalability, flexibility, and cost-efficiency in government IT infrastructure.

Geographic Information Systems (GIS): Platforms for mapping, analyzing, and visualizing spatial data to support decision-making and planning in government operations.

Collaboration Tools: Software for facilitating communication, collaboration, and knowledge sharing among government employees and agencies.

Emerging Technologies: Exploration and adoption of emerging technologies such as artificial intelligence, blockchain, and Internet of Things (IoT) to enhance government services and operations

Solutions IT and Infrastructure

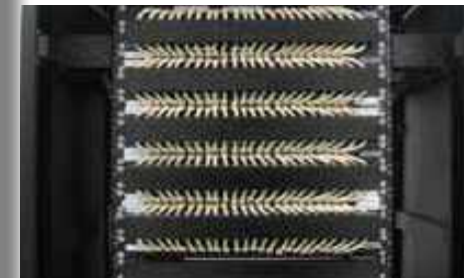

Servers and Storage

EDGE delivers superior server and storage solutions through our world-class partners providing our customers with the best cost-effective solution

Network Security Solutions

EDGE implements advanced security measures that include Antivirus, Firewall, Intrusion Prevention, and VPNs from major IT vendors.

Structured Cabling

EDGE specializes in providing voice data, fiber optic, and LAN rollouts based on reliable, high-quality, and standards-based cabling and network infrastructure components.

Data Center, Power and Cooling

EDGE provides end-to-end power and cooling solutions designed for maximum reliability and quality for data center operations through our partners.

Cyber Security

New ways of business operations and customer interactions demand a new approach to protecting critical assets. Our end-to-end cybersecurity services cover IT and industrial systems, and IoT products, to help your enterprise achieve digital transformation with security at its core.

Disaster and Backup Recover

EDGE provides a complete IT business continuity solution to businesses that protects and restores data, servers, and entire data centers from natural or man-made disasters.

TIER-IV Data center Design & Build

Our Experience TIER IV DATA CENTER experts design, implement and manage the highest level of infrastructure availability and uptime, with multiple levels of redundancy built into all systems. This includes backup power supplies, cooling systems, and data communication connections, to ensure that operations continue without interruption even in the event of an equipment failure.

Solutions Cybersecurity

At EDGE ICT, we're more than just a cybersecurity specialist we're your trusted partner in safeguarding your digital assets. we offer a comprehensive suite of cybersecurity solutions designed to address the ever-evolving threats facing your organization. From proactive threat detection to incident response and compliance management, our solutions are tailored to meet your specific needs and protect your most valuable assets.

Threat Detection & Prevention

Stay ahead of emerging threats with our advanced threat detection and prevention solutions. We employ cutting-edge technologies and proactive strategies to identify and mitigate cyber threats before they impact your business

Incident Response & Recovery

In the event of a security incident, our incident response and recovery services ensure a rapid and effective response. Our experienced team will guide you through every step of the incident lifecycle, from containment to recovery, minimizing downtime and mitigating damages.

Compliance, Regulatory.

Achieve and maintain compliance with industry regulations and standards with our compliance and regulatory support services. We provide expert guidance and assistance to help you navigate complex regulatory requirements and ensure your security posture meets the highest standards.

Managed Security Services:

Offload the day-to-day management of your security infrastructure to our team of experts with our managed security services. From 24/7 monitoring to threat intelligence and incident response, we'll ensure your organization remains secure and resilient in the face of evolving threats.

Solutions

Enterprise Software Services & Development

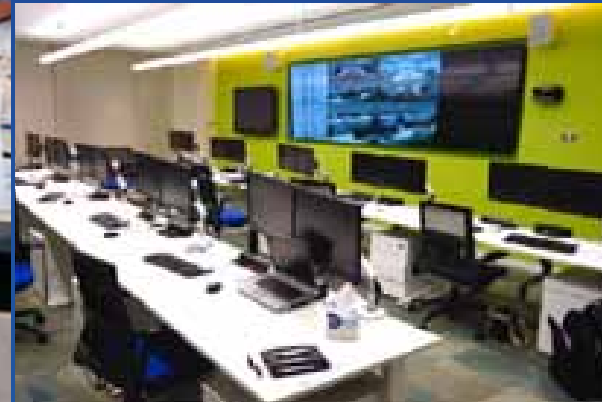

Enterprises Software Solution

EDGE software development services cater to specific industries or specialized needs, providing tailored solutions to unique challenges. These services focus on developing custom software applications, platforms, or tools that address niche requirements not adequately met by off-the-shelf software. Examples include software for healthcare management, financial analytics, legal practice management, agriculture technology, or industrial automation. EDGE software developers possess deep domain expertise in their target industries and offer personalized solutions to optimize processes, enhance efficiency, and drive innovation within their niche markets.

Our Expertise includes

Solutions Business Communications

Video Conferencing

In combination with our professional solutions, we design sleek video conferencing technology and is complemented with our internet connectivity as a turn-key solution built on professional systems.

VoIP

Vizocom provides end-to-end power and cooling solutions designed for maximum reliability and quality for data center operations through our partners.

Digital Signage

Professional digital signage encompasses the deployment of specialized digital displays in commercial environments for effective communication, advertising, and information dissemination to engage and inform audiences.

Unified Communication

Unified Communications (UC) combines all your communication tools like voice, video, messaging, and collaboration apps into one platform for easy access and seamless interaction, no matter where you are or what device you're using.

Solutions Wireless Systems

P2P and P2MP Solutions

P2P (Peer-to-Peer) solutions facilitate direct communication and data sharing between individual devices or users without the need for a central server. P2MP (Peer-to-Multipoint) solutions extend this concept to enable one-to-many communication, allowing a single device or user to disseminate information to multiple recipients simultaneously.

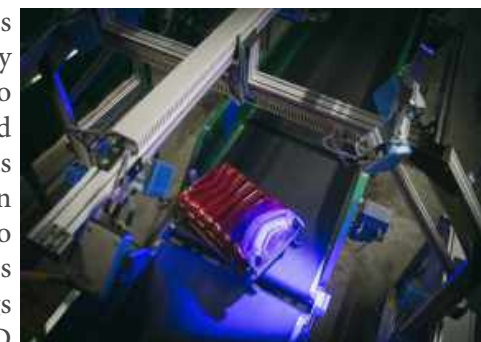

Wireless LAN Solutions

EDGE provides wireless LAN solutions that optimize the enterprise network to deliver the best performance and reliability, empowering mobile users with high quality connectivity.

Longrange RFID Solution

Long-range RFID wireless solutions utilize radio frequency identification technology to enable the wireless tracking and identification of objects or assets over extended distances, often ranging from several meters to several kilometers. These systems typically consist of RFID tags attached to objects and RFID readers equipped with antennas to detect and communicate with the tags from afar, facilitating efficient asset management, inventory tracking, and logistics operations across large areas

Solutions

Audio Video Systems

We offer a variety of innovative and state-of-the-art audio visual solutions to our customers in the Middle East, allowing them to deliver impactful and relevant messages to their audience. EDGE's Collaborative Work Environment Solution has been recognized as one of the most advanced information sharing and communication tools in the Oil & Gas Industry.

Home Cinema Solutions

We provide the best in class Home Cinema solutions including the 3D cinema, silver screens, Projectors surround sound amplifiers and more

IPTV and SMATV

EDGE designs and provides Satellite Multi-Access TV (SMATV) services from small systems to large solutions with tens of distributed channels for hundreds of users. We also provides turn-key solutions for Satellite IPTV as a low cost alternative to SMATV by using our client's LAN network to distribute TV Channels, eliminating the need for a separate cabling required for an analog SMATV solution.

PA & PAGA

EDGE is a Bosch Partner and has designed and implemented public announcement and PAGA (Public Alert and General Alarm) systems for Oil and Gas sector, government agencies and private companies using leading manufacturers including but not limited to Bosch, TOA, and Federal Signal.

Control and Digital Media System

We offer Digital Media System solutions dedicated to enterprise markets as a single platform solution. Our Digital Media System solutions are ideal for Auditoriums, Board Rooms, and Meeting Rooms.

Digital Signage & Display Solutions

We provide digital signage solutions from prominent brands with highly scalable, centrally managed digital signage display systems for enterprises covering a wide variety of industries and purposes.

Solutions

Surveillance & Public Security Systems

Security Solutions

We provide security and surveillance systems which are designed with comprehensive technology, advanced features, and industry-ideal quality in collaboration with our partner manufacturers.

Intercom Systems

We provide high quality video and audio entry systems with a variety of range, from boxed kits to meticulously designed systems for multiple areas with unlimited number of simultaneous users.

Fire Alarm and Detection Systems

Fire Alarm and Detection Systems are now an essential component of building and facility safety. Whether the facility requires a stand-alone system, a medium-to-large system or a large integrated network, EDGE's fire alarm solutions are flexible enough to provide the required protection and integrate into your total building/facility management system.

Entrance Security

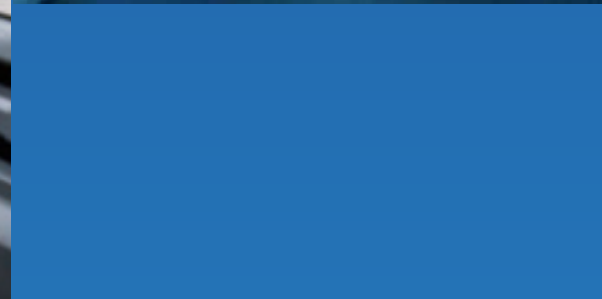

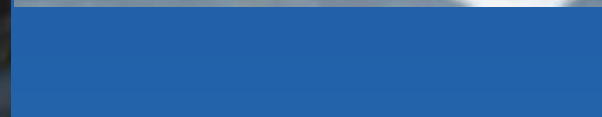

We provide a wide range of entrance security solutions which gives you control over the movement of individuals to, from and around a site.

Access Control Solutions

A professional access control system regulates entry to buildings or areas by managing and monitoring who has access to specific locations or resources. It typically includes hardware like card readers, keypads, or biometric scanners, along with software to manage access permissions and log entry attempts. These systems enhance security, improve accountability, and offer flexibility in managing access rights for employees, visitors, and assets within an organization

Solutions

Parking Management Solutions

Intelligent Parking Management

Intelligent parking management systems employ sensors, cameras, and software to track parking space availability, facilitate entry and exit with automated gates, and optimize parking space utilization, ultimately enhancing convenience and reducing congestion for drivers.

Barrier/Gate System

Barrier/Gate Systems employ automated gates or barriers to regulate entry and exit to parking facilities. They often integrate with payment or validation systems to ensure access control and facilitate smooth traffic flow.

LPR & ANPR Solution

License Plate Recognition (LPR) Systems utilize cameras and software to capture and analyze license plate information. These systems are commonly used in parking management to monitor parking activity, enforce regulations, and manage access to parking facilities.

Bollards | Road Blockers | Tyre Killers

Tyre Killer systems are security barriers featuring retractable metal spikes installed at entry or exit points. Activated remotely, they quickly deploy to puncture the tires of unauthorized vehicles attempting to breach secured areas, effectively preventing access.

Smart Parking Guidance

Smart Parking Guidance Systems employ sensors installed in parking spaces to detect the presence of vehicles. Information from these sensors is then relayed to a central system, which directs drivers to available parking spots through signage or mobile apps, optimizing parking space utilization and enhancing the overall parking experience.

Turnstile gate systems

Turnstile gate management systems are security barriers with rotating horizontal arms mounted on vertical posts, regulating pedestrian traffic flow at entry/exit points. They're used in various venues like stadiums, transit stations, and office buildings for crowd control, security, and access management.

Solutions

Smart Homes

- Manage all your devices from one place.
